

# FarMet

Why choose **FarMet**?

Methionine is the first limiting amino acid in the diet of dairy cows. Unlike other similar products in the world, our product contains 50% methionine, of which more than 80% passes through the rumen and is released in the small intestine.

Benefits of consuming **FarMet**:

- \* Increase milk production and milk protein percentage
- \* Enhance livestock immune response during stressful periods
- \* Reduce stress during heat stress and increase fertility
- \* Strengthen liver function and reduce the incidence of fatty liver
- \* Improve fertility and reproductive indices
- \* Reduce the consumption of expensive dietary protein sources (soybean meal)

Recommended Dosage:

- Dairy cows: 10–30 g/day
- Beef cattle: 8–15 g/day
- Sheep and goats: 2–5 g/day
